Summary

Product designer transitioning from three years of software engineering experience at JPMorgan Chase. Skilled in Figma prototyping wireframing user research and synthesis competitive analysis interaction design information design design systems usability iteration and problem framing. Brings engineering fluency to design work and ships interfaces end to end.

Skills

Design: Figma, Prototyping, Wireframing, User Research and Synthesis, Competitive Analysis, Interaction Design, Information Design, Design Systems, Usability Iteration, Problem Framing

Development: React.js, TypeScript, JavaScript ES6, UI/UX, REST APIs, SOAP APIs, Git, Node.js, Express, Tailwind, HTML5, CSS3, MongoDB, Firebase, Webpack, Vite, npm, Agile/Scrum, CI/CD workflow, SEO, WebSockets, Docker, Cloud

Experience

Full Stack Software Developer – JPMorgan Chase and Co

Jul 2024 to Present

- Spearheaded a three member team to build a React and Flask monitoring app and migrate dashboards to Grafana enabling real time cluster visibility and reducing SRE checks by 75 percent used daily by 30 engineers
- Deployed a React monitoring dashboard on AWS ECS consolidating Prometheus metrics and PostgreSQL data into a single platform now actively used by 40 engineers
- Built an Oracle APEX UI page that enabled 50 employees to delete their own pods cutting cleanup time by 5x and saving 720 hours a year and resolved a production outage in 1 hour

Software Engineer Program Intern – JPMorgan Chase and Co

Jan 2024 to Jul 2024

- Collaborated in migrating a legacy Angular frontend to ReactJS with internal UI libraries ensuring consistent UX as Angular approached end of support and improving maintainability
- Set up real time Kubernetes alerts via Grafana Prometheus and Splunk for pod failures and anomalies reducing issue response time by 50 percent

Achievements

- Speaker at the React Bangalore Meetup hosted by MiQ on bridging design intent and engineering in React apps
- JPMorgan Chase Code for Good Hackathon full stack MERN app against 900 participants awarded an internship offer
- 2nd Place JPMorgan Chase Global Hackathon 2024 revamping the internal global employee contact book improving UI UX and usability
- Co led a QGIS workshop at the Science Gallery NIAS with Dr G P Diwakar ISRO Chair Professor NIAS on geospatial features for satellite imagery analysis

Education

Bachelor of Technology in Computer Science Engineering
Dayananda Sagar University

Jul 2020 to May 2024
GPA 9.04

Product Design Projects

[LinkedIn Concept UX Case Study 2026](#)

Reframed a vague brief into a sharp problem statement backed by community research across r jobs and r recruitinghell and a competitive teardown of Huntr Jobscan and LinkedIn native tracking. Designed four high fidelity features surfacing real time status recruiter activity persistent search history and progress overview validated with an AI assisted persona test.

[ShadeMatch](#)

React app that extracts dominant colors from clothing photos and generates AI driven outfit matches with direct shopping links.

[The Automated Oven App](#)

React Native app to control and monitor a smart oven remotely with real time notifications when food is ready.
